

Listing of Claims:

1. (Currently amended) Device for the metered delivery of small amounts of a substance, comprising a case for the substance and an outward leading opening for the delivery of the substance, characterised in that the substance itself is formed as the case and has the shape of a block (10) with such a size that it can be at least partially gripped by the hand of a person or can be held in the hand, that the block is formed with a firm surface (11) on the outside and that an actor (20) is introducible and inserted through the opening (13) of the block, which releases and delivers desired amounts of the substances through rasping, pushing or friction engagement (24) with the inside of the block (10) and/ or areas surrounding the opening, and that the substance is table salt and the block (10) is formed from a solid table salt body, which either has its natural shape or has been brought into a different desired shape (for example that of an egg) .
2. (Currently amended) Device according to claim 1, characterised in that the actor (20) is provided with a source of light.
3. (Currently amended) Device according to claim one of the claims 1 or 2, characterised in that the source of light is a light-emitting diode.
4. (New) Device according to claim 2, characterised in that the source of light is a light-emitting diode.
